

A Four ways the retinal image changes

C The recording

Allen Brain Observatory, awake head-fixed mouse

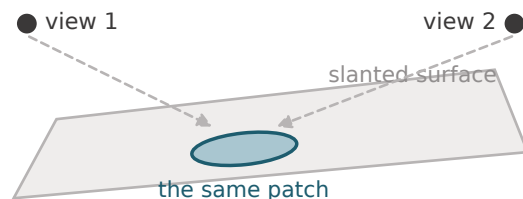

17 experiment containers

- A** drifting gratings
- B** static gratings
- C** locally sparse noise

layer 2/3, 175 and 205 μm
two-photon, 30 Hz, GCaMP6f

B Why elongation has to vary

one surface patch, seen from two directions

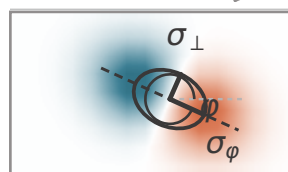

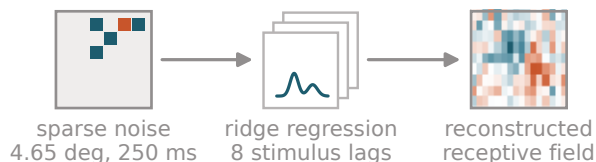

circular receptive fields

elongated receptive fields

D From stimulus to fitted model

Gaussian derivative model, order 1
every neuron fitted at orders 0, 1 and 2; the best order kept
